description

The TPIC5424L is a monolithic logic-level power DMOS array that consists of four electrically isolated N-channel enhancement-mode DMOS transistors, two of which are configured with a common source.

The TPIC5424L is offered in a 16-pin thermally enhanced dual-in-line (NE) package and a 20-pin wide-body surface-mount (DW) package. The TPIC5424L is characterized for operation over the case temperature range of -40°C to 125°C .
