

PDSM010

Particle Sensor Module

Features

- ◆ Customized sensitivity for efficient control in application
- ◆ Detects approx. $1\mu\text{m}$ particle
- ◆ MCU F/W setting by factory
- ◆ Excellent long term reliability and easy maintenance
- ◆ LPO Output (Low Pulse Occupancy)
- ◆ External Noise Protection by Shield Can Extension

Product Summary

PDSM010 detects approx. $1\mu\text{m}$ particle such as house dust, pollen, germs, dust mites and cigarette smoke and measures the concentration of floating particles in a room space up to maximum 30m^3 .

This sensor is an ideal product for automatic room air monitoring system such as an air purifier.

PDSM010's signal is converted to LPO output by internal circuit and MCU program. Also, the

sensor's filter circuit and MCU program can remove a noise in order to operate more stably when a noise is in-flowed in the signal.

PDSM010 has advantages of both stable detecting ability and high manufacturing efficiency.

The sensor does not have an additional control point (VR Trimmer) on the device unlike its previous model (DSM). It prevents potential malfunction often occurred by user's arbitrary modification.

Applications

- ◆ Air cleaners, Air conditioners
- ◆ Ventilation System, Fan Control
- ◆ IAQ Monitoring & Control
- ◆ IoT Device

Product Specification

Ta = 25°C

Parameter	Symbol	Rating	Unit
Supply Voltage	V _{cc}	5V ± 10%	V
Supply Current (@ 5V)	I _{cc}	< 85	mA
Storage Temperature Range	T _{stg}	-20 ~ 80	°C
Operating Temperature Range	T _a	-10 ~ 65	°C
Operating Humidity Range (Without dew condensation)	RH	< 95	%RH
Particle Detection Range *1	Detectable Particle Size : > 0.85µm		
	Concentration : 300µg/m ³ Count : 8,000 pcs / 283m ³		
Output Signal	LPO (Low Pulse Occupancy) - Low Logic Pulse Active Output		
Weight	22.5g		
Size	(W) 59 mm x (H) 45 mm x (D) 17 mm		

*1 : It refers to the range which accuracy tolerance is guaranteed.

Output Characteristics

V_{cc} = 5V, Ta = 25°C

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Vout2 at high *1	Voh	No particle	-	V _{cc}	-	V
Vout2 at low *2	Vol	Particle	-	-	0.8	V
Time for stabilization *3			1	-	-	minute

*1 : Vout 2 at the highest state when particles are not detected. (=clean room)

*2 : Vout 2 at the lowest state when particles are detected.

*3 : It refers to the heating time to create stable air flow after power-on.

Life Expectancy

Light Emitter MTTF : 49,099 hrs (ALT Test Condition : 85°C, 1,000hrs)

Internal Configuration

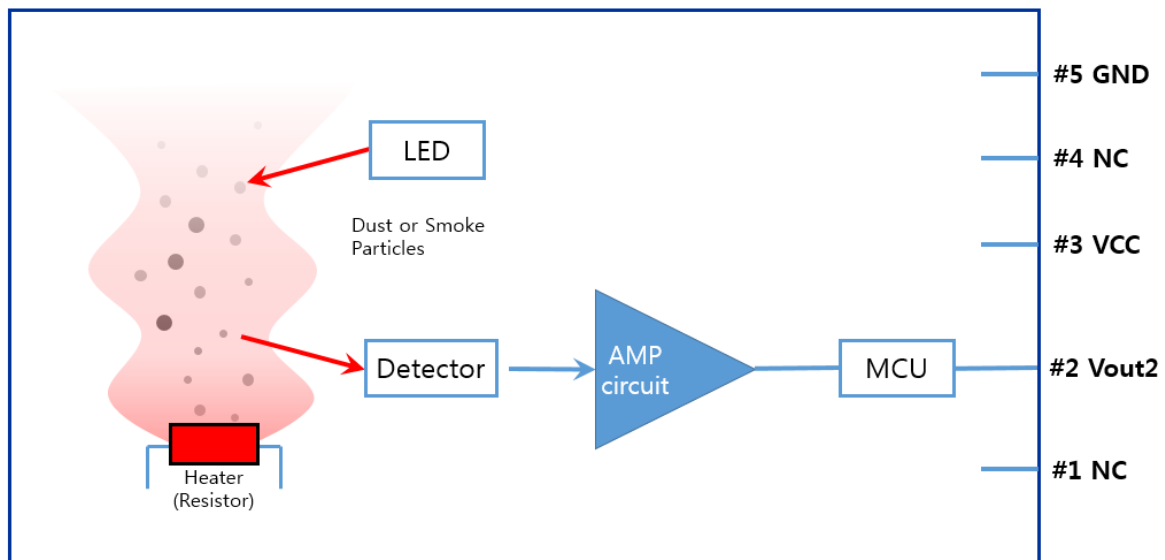

Figure 1 Internal Configuration

According to above Block Diagram, PDSM010 consists of infrared LED for particle detection, Photo TR for scattered infrared signal, OP-Amp for signal amplification.

The principle of particle detection is that while in-

flowed particle is passing by the measuring scope through upstream with self-heating of heater, the lights from LED is scattered by particle and is recognized as a signal at detector. The signal from detector is filtered by circuit and MCU, and it is transformed into a LPO signals.

I / O Connector Specifications

Pin number	Pin name	Description
1	NC	No connect
2	Vout 2	Vout 2 output (LPO)
3	Vcc	DC 5V Input
4	NC	No connect
5	GND	Ground

PIN Description

NC (Pin #1)

No connect

Vout 2 (Pin #2)

This Pin is used to transform small dust signals into LPO (Low Pulse Occupancy) signal (Active Low). Refer to the attached additional 'Application Note'.

Vcc (Pin #3)

The Pin of DC 5V input Power.

For stable operation, the power supply range should be adjusted within $\pm 10\%$ and Ripple has to be below 30mV.

NC (Pin #4)

No connect

GND (Pin #5)

Pin #5 is used for Ground.

Connector Description

Model name	Part No.		Description	Connector's maker
PDSM010	Wafer	S5B-EH	2.5mm pitch	J.S.T.
	Housing	EHR-5		

**** Please use AWG24 or thicker wire to connect PDSM010.**

Basic Circuit Diagram

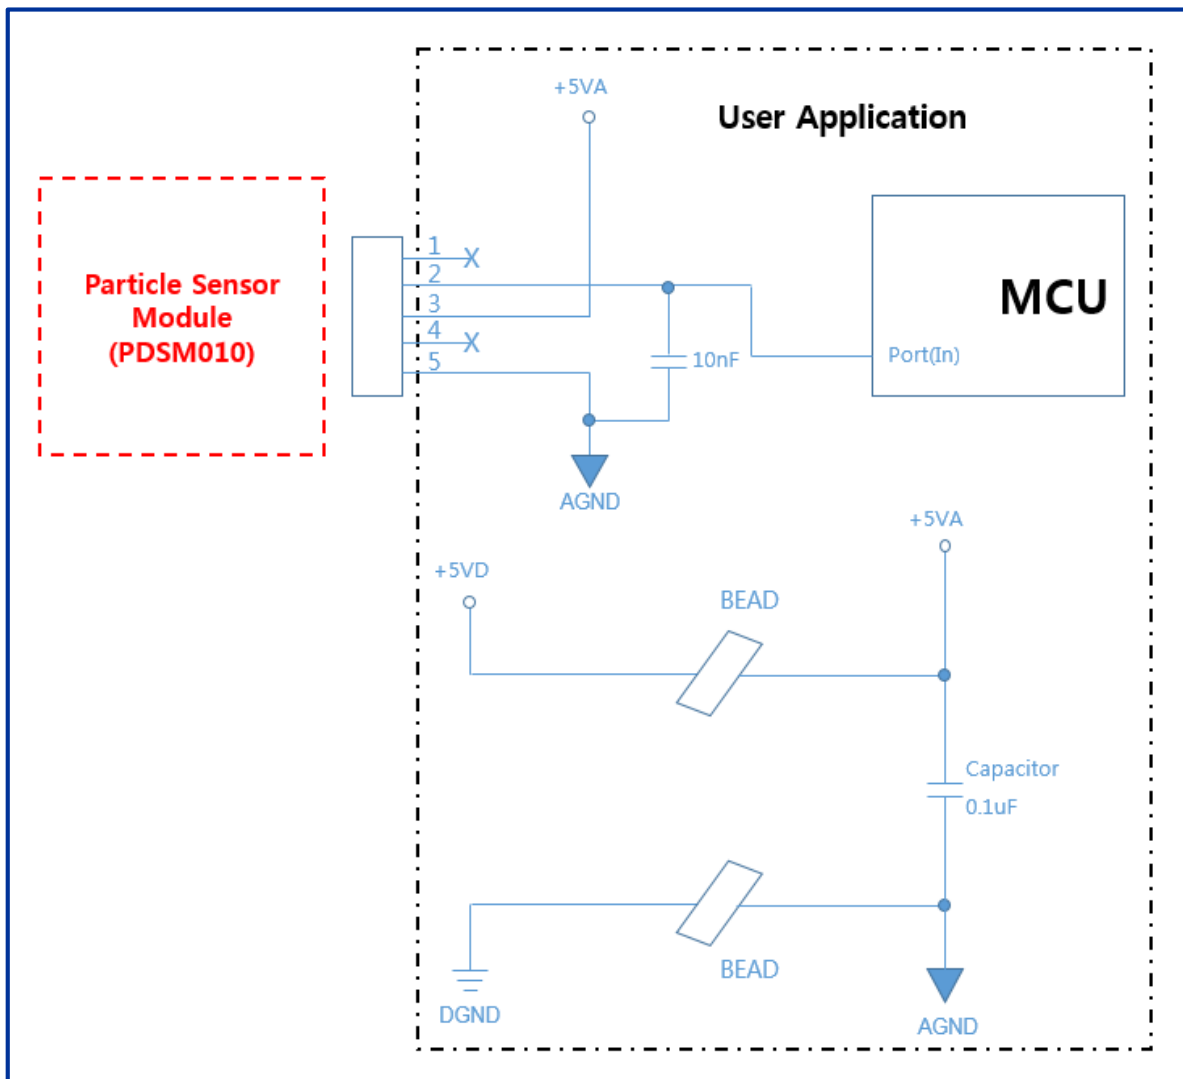

Figure 2 Basic Schematic

** Please use an extra power regulator and/or a bypass capacitor(below 10nF) on the signal line in order to compensate noise if there is noise on the signal or power line and/or signal line are longer than 50cm.

Particle Sensor Characteristics

Low Pulse Ratio and Particle Count (pcs/283mℓ) Correlation

Figure 3 Low Pulse Ratio and Particle Count Correlation Graph

** The sensor's characteristic is verified at the following condition :

Ambient Temperature and humidity of 22±5°C and 30~60%RH in 30m' room chamber.

The reference is located at the center of the room chamber. For more details, please contact SAMYOUNG S&C.

** 283mℓ = 0.01 CF(Cubic Feet).

Particle counters use CFM(cubic feet per minute) for Flow Rate in general and it is converted into Liter on the above graph.

** The particle weight concentration in this datasheet was measured on the basis of the reference and the accuracy of weight concentration solely depends on the reference. Please contact SAMYOUNG S&C for weight concentration conversion.

Low Ratio Calculation

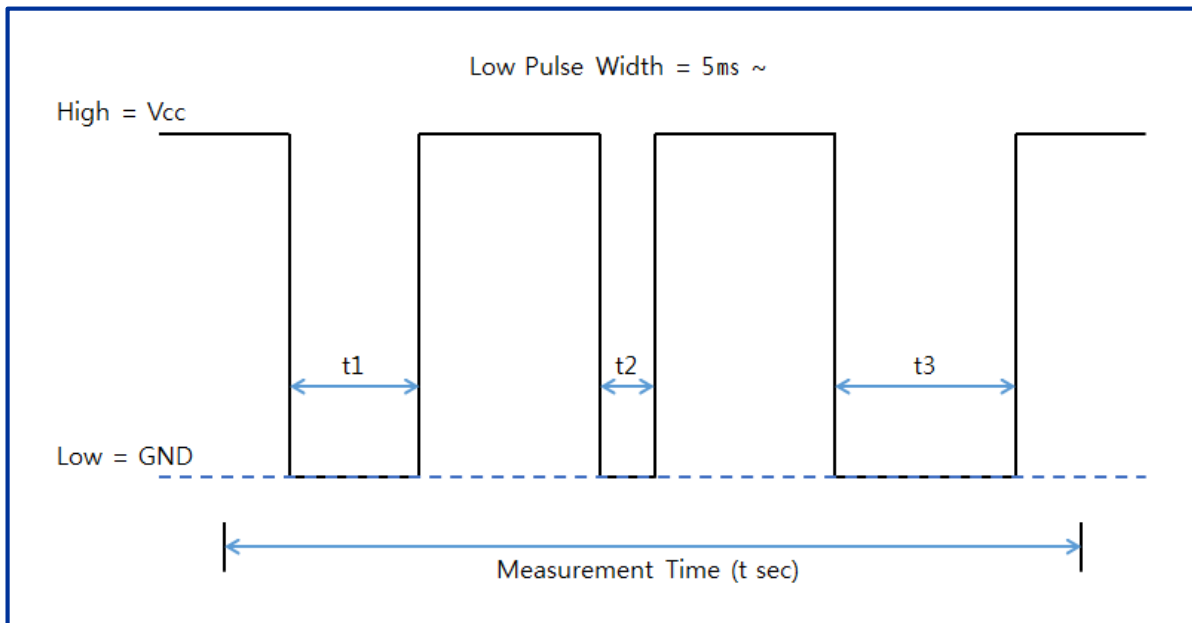

Figure 4 Particle Sensor Low Ratio

$$\text{Low Ratio (\%)} = (t1 + t2 + t3) / t \times 100$$

(Measurement Time is calculated by a percentage of sum of Low signals occurred within t (Approx.60) seconds))

** 60 sec for calculating Low Pulse Ratio is recommended.

If it is shorter than 60 sec, the signal detection becomes too sensitive that may lead to frequent fluctuation.

If it is longer than 60 sec, the signal detection becomes insensitive.

** Checking the changes of Low Pulse Ratio(%) values should be done by 1~2 sec cycle.

If to set other time cycles, please contact SAMYOUNG S&C for an advice.

Ordering Information

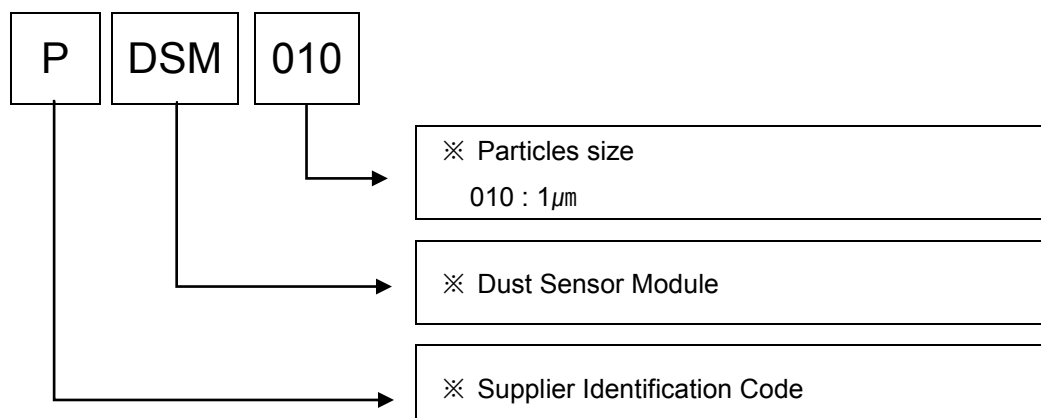

Figure 6 Ordering Information

Packaging Information

Type	Quantity (pcs.)		S i	
	Tray	Out box	Tray	Out box
PDSM010	25EA	250EA	365×300×25	380×320×255

Tray : 25pcs / 1 Tray (PS, 365×300×25mm)

Out box (KBL3SK, 380×320×255mm) : 10 Trays (250pcs)

Caution

Please do not adjust, disassemble or reassemble the sensor arbitrarily. It may cause malfunctions of the sensor.

To use the product properly, please refer to the attached additional 'Application Note'.

Please avoid using this sensor for Emergency or Fire alarm application.
